

Patent claims

1. A device for forming a combined pack, which contains the following constituent parts:
 - 5 - a connector 2 with a left-hand part 6, a wall 7, into which two holes 8 are introduced, and with a cavity 3 to the right of the wall 7,
 - a left-hand and right-hand side 1a and 1b,
 - a closure 4 with two arresting means 5,characterized in that the connector 2 can be fixedly connected to the closure 4
10 in a straightforward manner via the arresting means 5 and the connector 2 and the closure 4 are form-fitting.
2. The device as claimed in claim 1, characterized in that the closure 4 is a screw-action closure.
- 15 3. The device as claimed in claim 1 or 2, characterized in that the connector 2 and closure 4 are connected via a screw thread.
4. The use of a device as claimed in one of claims 1 to 3 for the fixed connection
20 of storage containers.
5. A combined pack which contains the following constituent parts:
 - two or more storage containers 10 each having a closure 11 and a handle 12,
 - 25 - a device 1,characterized in that the storage containers 10 are fixedly connected via the device 1.
6. The combined pack as claimed in claim 5, characterized in that the storage
30 containers 10 are canisters.
7. The combined pack as claimed in claim 6, characterized in that the storage containers 10 are of different sizes.

8. The combined pack as claimed in one of claims 5 to 7, characterized in that the device 1 and/or the storage containers 10 are made of plastic.
- 5 9. The use of a combined pack as claimed in one of claims 5 to 8 for packaging pourable materials.
10. The use of a combined pack as claimed in claim 9, characterized in that the pourable material is a crop protection agent.
